What's AutoCAD Serial Key? AutoCAD is a desktop-based 2D CAD software application developed by Autodesk. It is one of the most used CAD software application on the market today. In many case, AutoCAD is used as a sole application instead of a specialized CAD application. It has also replaced the former popular Autocad LT in many installations. AutoCAD is offered as a standalone or bundled software package with many applications and tools, such as the SketchUp application to create 3D models and the 3D Builder application to build and publish a 3D model from drawings. AutoCAD also comes in several editions: AutoCAD LT is a software for 2D drafting and is focused on students and small business. It comes with a limited set of features and can't be used for any complex design or drafting.

Applications AutoCAD can be used to create technical drawings. For example, if a building contractor requires a drawing for a particular building project, they would have to use AutoCAD and create their own drawing. However, a large number of engineers, architects and other non-technical users prefer AutoCAD for their own projects. AutoCAD has native compatibility with several leading CAD formats such as STEP and IGES. Model creation Autodesk 123D AutoCAD can be used to build 3D models from many different sources, including: 2D drawings (AutoCAD and others) 3D models (through 3D content, or by importing 3D point clouds, voxel grids, or structured light scans) geospatial data (GIS data, MDSYS files) A 3D model can be created from a 2D drawing by using standard modeling tools such as snap to fit, loft, extrude and rotate. The new Autodesk 123D app for iPhone and iPad is an alternative to using AutoCAD for creating 3D models. Autodesk 123D is a mobile app, with over 1.2 million users, that allows users to import CAD data, rotate it to create a virtual model, and then use the app to enhance it with sounds, text, and renderings. 123D models can be exported as either 2D or 3D geometry (usually as standard DWG or DXF) as well as a selection of 3D formats. The app has the ability to recognize surfaces and supports materials. Sebastian Vettel has apologised to Fernando Alonso for the Ferrari driver's crash in the Belgian Grand Prix but insists there was no intent to cause him damage. "It's never nice to see the guy you have a good relationship with in the box, let alone losing the championship," Vettel said after qualifying on Saturday. "It's unfortunate for him, it's unfortunate for me and also for the team." Alonso went into his Mercedes team garage with a damaged floor and Vettel said "I mean what can you say, you crash, the car is damaged and obviously the championship is over". Ferrari mechanics saw Alonso's car get airborne on the Kimmels straight when it was damaged in the first corner of the race by his car being shunted off the track by Vettel's, while the pair were running side-by-side. Alonso has been left with a fractured foot after crashing into a barrier and says he will miss the final three races of the season. "Of course I'm disappointed," said the four-time world champion. "The only thing I'm concentrating on is the foot and my leg but that's not going to be enough. "I still want to have a good career and I know I've got a lot of things ahead of me and I can't wait for the next races. "This season has been a very good one. But I'm not happy because I want to be racing but also I want to be on the podium. I think I have a lot to give. It's part of the game. "It's a tough moment but I'll get better. I'm lucky. I'm okay. I just want to be racing." Alonso had been in a strong position to secure his third drivers' title with a victory in Spa but he dropped behind Vettel and was beaten in the championship battle. "I still think it's possible, if there's one guy that's going to win it this year it's me," said the Spaniard. "I'm not saying it's impossible that we lose the championship. We will be fighting for
