Computer Aided Design Computer-aided design, CAD, is the use of computer technology in the fields of architecture, engineering, and manufacturing to create a model or image of a physical object. To become a CAD designer, there are several different paths. The most common, and most laborious, path is to become an AutoCAD Designer, AutoCAD LT Designer, or AutoCAD Architecture Designer. With it, you can draw 3D objects and create plans or drawings, using any of the basic drafting features. Another path is to become a Mechanical Designer, an Electrical Designer, or an Architectural Designer. This path allows you to create 3D models of mechanical systems, electrical systems, and buildings, respectively.
