What's New in the FileCenter Automate?

If you have ever used software like Total Commander or WinSCP, you will know how easy it is to move, copy, rename, lock, delete, compress and restore files on a Windows-based computer. FileCenter Automate is a comprehensive software application built specifically for helping you perform those tasks. It

allows you to move, copy, rename, lock, delete, compress and restore files on a Windows-based computer. What's more, you can activate the batch mode for processing multiple files at the same time, schedule tasks, and select the file types to be imported from the user-defined location, such as TIF, PDF, GIF, PNG, JPG, TXT, DOC, XLS, PPT, and HTML. The program gives you the possibility to create a new conversion job by specifying the job name and file location. You can also include subfolders, delete the input files at the end of the conversion, use the same directory structure for the output items, and pick the saving directory. You may also include separators, which are special pages for delimiting your items. Using separators you can convert files in a batch mode from the scanner and automatically save every item to a different location. You can create three different types of separators, namely generic ones, which have one purpose: separating documents, standard types for adding fixed-length pages, filename rules, selectable conversion formats, or bookmark ones for placing a bookmark in the PDF. During our testing we have noticed that FileCenter Automate is able to process multiple files pretty quickly and without errors. It is quite friendly with system resources, so the overall performance of the computer is not hampered. All in all, FileCenter Automate offers a comprehensive suite of tools for helping you perform conversion operations. Although it may seem more appropriate to advanced users, rookies can easily install and configure the app, thanks to its intuitive layout and comprehensive help manual.
