Image viewer: easy to use and clean I use this tool for years (since it was brought to Windows), and I can say that it is the best image viewer available. Although it offers nothing new, but it is simply the best. It has all the features a image viewer must have, and it is quite easy to use, except the things related to configuration.

Image viewer: clear and intuitive The interface is very easy to use, and to configure, but, as it is said before, the configuration part is not easy, because it's not very intuitive. But it's not that difficult to learn. The best part is the preview mode. It is very clear and detailed, but it doesn't have all the features a real software must have. How to build a HTML page with SlickView The application is very simple to use and start building your gallery right away. First off, you'll have to create your first HTML file. To do this, click on the New button in the File menu, and create a new HTML file named as the page name in your folder. You'll have to choose the page type, the page name, and set up the background and the layout for your HTML. SlickView has ten pre-defined templates that you can choose from, or you can create your own layouts from scratch. If you choose the default layout, you'll end up with a page similar to the example below. If you need to change the background color, click on the Create Background button on the right. There are five colors in the available palette which you can use to configure your background, or change the color used on the page. Finally, you'll need to insert your images. Each image is inserted in an area of the page called Canvas. To insert a picture, you just drag the picture to the Canvas area. After you've inserted the images, you have to insert one or more sections. To do this, click on the Create Section button on the right.
