1. Field of the Invention The present invention relates to a semiconductor device and a method of manufacturing a semiconductor device. In this specification, a semiconductor device refers to all types of devices that can function by utilizing semiconductor characteristics; an electro-optical device, a display device, a light-emitting device, a semiconductor circuit, and an electronic device are all semiconductor devices. 2. Description of the Related Art Attention has been focused on a technique for forming a transistor using a semiconductor thin film formed over a substrate having an insulating surface (also referred to as a field-effect transistor (FET) or a thin film transistor (TFT)). The transistor is used in a wide range of electronic devices such as an integrated circuit (IC) and an image display device (display device). A semiconductor circuit including a transistor is an essential part of a variety of integrated circuits; a video display device, an electro-optical device, and an electronic device with a large screen such as a mobile computer and a mobile telephone are driven by a semiconductor circuit including a large number of transistors. Whether or not a semiconductor device includes transistors or a semiconductor circuit is referred to as a transistor (an IC or an electro-optical device). A technique of forming a transistor (a semiconductor circuit including a transistor) using amorphous silicon or polycrystalline silicon has been disclosed (see Patent Documents 1 to 5 and Non-Patent Document 1). Transistors include a selection transistor and a memory transistor. The selection transistor is used for selecting a memory capacitor to be electrically connected. Blunt aortic injury: an observational study of outcome and management strategies. To examine the incidence, complications, and trends in management of blunt aortic injury (BAI). The analysis used data from the National Trauma Data Bank (NTDB) (2004 to 2011). Aortic injury was identified using the International Classification of Diseases, Ninth Revision, Clinical Modification. Patients were included if they underwent surgical repair of BAI. The primary outcome was in-hospital mortality. Secondary outcomes included cardiopulmonary resuscitation (CPR), thoracotomy, open distal anastomosis, repair of aortic arch, and total aortic repair. Trends in repair of BAI were analyzed. The analysis included 2,236 patients; they underwent repair of BAI. The overall in-hospital mortality was 6.7 6d1f23a050
