A short and convergent synthesis of novel isatin-functionalized di- and triazolylbenzodiazepines (1-7) is described. The structural diversity of these compounds arises from incorporation of a [1-(1H-1,2,4-triazol-1-yl) or (1H-1,2,3-triazol-1-yl)phenyl]methanone group into the structure. A UV-light-induced rearrangement of such triazolylbenzodiazepines (8-13) afforded the benzodiazepines 14-17, with a distinct 1,8-naphthyridin-2(1H)-one core. This work establishes that isatin moieties can be used as versatile pharmacophores and that the 1H-1,2,4-triazol-1-yl or 1H-1,2,3-triazol-1-yl group can be introduced into the benzodiazepine nucleus by divergent routes. The antiproliferative properties of these compounds against a panel of cancer cell lines were evaluated and compared with those of two previously reported analogues.America's Cup class: A gust of wind moves sailing boats JUST WATCHED America's Cup sailing race expert MUST WATCH Story highlights The first race of the America's Cup sailing series was on New Zealand's most famous racecourse Sunday More than 70 boats filled the area to watch the race A gust of wind lifts a boat on the horizon, then two more at a time, a fast-moving wall of white-sailed racing boats racing across the blue horizon.
